

CAN'T TAKE THE HEAT.

CAN'T STAND THE COLD.

No worries.

INSIDE, LIFE IS GOOD.

Color neutrality ensures

crisp, clear views through ClimaGuard Low-E Glass.

CLIMAGUARD® LOW-E GLASS

GET COMFORTABLE. TIME FOR YOUR GLASS TO GO TO WORK.

ClimaGuard Low-E Glass. Another innovation from the scientists at Guardian.

At Guardian, we've been world leaders in glass manufacturing and technology for over 75 years. And ClimaGuard Low-E Glass is the latest in a long line of innovative products. In fact, the more you know about ClimaGuard Glass, the more you'll be convinced of its superior capabilities.

The environment is not your friend. It has a tendency toward dramatic fluctuations throughout a single day — not to mention throughout an entire season. ClimaGuard Low-E Glass actually goes to work, regulating your interior environment every day, every hour, in every season — unlike "standard" glass

(which really just sits in a window passively).

That's the beauty of the world's most advanced low-E glass.

Keeps you warm when it's cold outside.

Our scientists have improved the insulating value of ClimaGuard Low-E Glass by as much as 50% over standard clear glass – resulting in significantly lower energy costs when heating your home. With ClimaGuard Low-E Glass, even the coldest regions can enjoy the view with little or no impact on energy consumption.

Keeps you cool when it's hot outside.

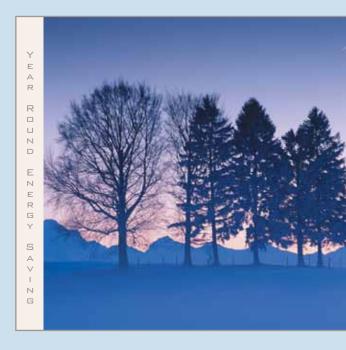

With ClimaGuard Low-E Glass, solar heat gain and damaging radiation can be significantly reduced without sacrificing clear views and daylight. ClimaGuard Low-E Glass blocks up to 50% more unwanted solar energy than standard clear glass, and up to 40% more than even dark tinted glass. As a result, air conditioning expenses are lowered while providing a more comfortable living environment. ClimaGuard Low-E Glass also blocks nearly twice as much harmful radiation as clear glass, extending the life of woodwork, carpets and furnishings, while still allowing plenty of natural sunlight to brighten interior spaces.

Keeps you comfortable in any climate.

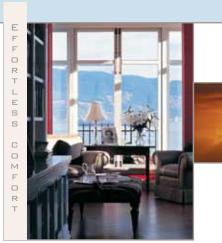

In mild climates or in climates that enjoy mild seasons, southern and western elevations of a home can be exposed to significant unwanted solar heat gain. The result is a higher temperature in rooms that are exposed to the sun, while the rest of your home and the air outside remain at a comfortable level. ClimaGuard Low-E Glass greatly reduces this effect and helps maintain a uniform comfort level throughout your home.

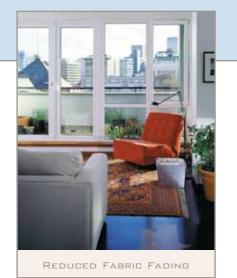

Windows with ClimaGuard Low-E Glass that are rated and certified by the NFRC can comply with EnergyStar® requirements for all climates in the country. Look for the EnergyStar® label to ensure you're getting the most energy efficient window for your climate zone.

Keep your home comfortable. Windows with ClimaGuard Low-E Glass coating will significantly increase the energy efficiency of your home.

ClimaGuard Low-E Glass
regulates your home's
temperature to help keep you cool
when it's hot and warm when it's not.

Reduce fading of your home furnishings. ClimaGuard Low-E Glass blocks nearly twice as many harmful UV rays as clear glass.

A GLASS FOR EVERY SEASON. EVERY HOME.

ClimaGuard Low-E Glass regulates the effects of external environmental conditions, like the height and intensity of the sun, to ensure that interiors stay comfortable.

Homeowner Benefits

- Increased comfort any climate, any season
- Reduced heating and cooling bills
- Supports EnergyStar® window program
- Color-neutral for crisp, clear views
- Helps keep indoor humidity at comfortable and healthy levels
