

LEAFPROOF®

Advanced Gutter Protection Systems

ERAN Industries, Inc.

Make your gutters absolutely LEAFPROOF®!

Leafproof® is a solid aluminum gutter cover that installs over existing gutters without penetrating your roof. The patented "S-Bend" slows the flow of rainwater, causing the water to adhere to the Leafproof® panel.

The Leafproof® System can be installed on any type of roofing, including shingles, slate, metal and tile, and on any roof pitch.

Technology Comparisons

Screens

THEIRS

- Easily clogged with small twigs, leaves and debris.
- Will cave in from snow and ice buildup.

LEAFPROOF®

Small 1/4-inch water channel opening leaves gutters virtually impenetrable. Made of sturdy .024-gauge aluminum.

Vinyl

THEIRS

- Squirrels and small birds can chew through the vinyl and build nests.
- Exposure to the elements can warp and crack vinyl over time.

LEAFPROOF®

Sturdy .024 aluminum will deter damage from critters. Endcaps prevent small animals and birds from entering and nesting. Offers a lifetime, non-pro-rated transferable warranty on finish.

Domed

THEIRS

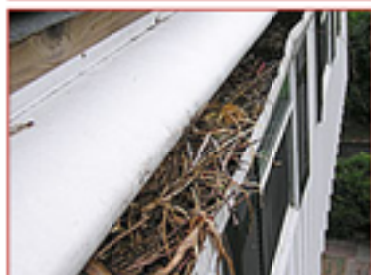

- Installed under the second row of shingles which results in an unsightly profile.
- Most are screwed or nailed into the roof which could lead to potential leaks.

LEAFPROOF®

Installed under the first row of shingles. Attaches to your existing gutter. Does not use screws or nails in the roof.

Combinations

THEIRS

- Most have a gap where birds and small animals may enter and build nests.
- Product not installed under shingles leaves the roof edge exposed and creates potential for water damage.

LEAFPROOF®

Complete enclosure (including premade end caps) prevents penetration by birds and small animals. Aesthetically low profile matches your gutters and roofline for enhanced curb appeal. LeafProof® also helps prevent damage from ice and snow.
